# HOW COMPUTER MAGIC PREVENTS A
CYBER ATTACK

Have you had a security assessment lately?

SPAM EMAIL

Secure your email. Most attacks originate in your email. We'll help you choose a service designed to reduce SPAM and your exposure to attacks on your staff via email.

PASSWORDS

Apply security policies on your network. For example, deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts and limit user access rights.

UPDATES

Keep Microsoft, Adobe and Java products updated for better security. We offer a critical update service via automation to protect your computers from the latest known attacks.

TRAINING

Train your users—often! Teach them about data security, email attacks and your policies and procedures. We offer web-based training and "done for you" security policies.
COMPUTER MAGIC

ADVANCED SECURITY

Move past outdated antivirus tools of the past. Contact us to see a demo of the latest in advanced endpoint protection available for your business.

FIREWALL

Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM. If your IT team doesn't know what those things are, call us today!

ENCRYPTION

Whenever possible, the goal is to encrypt files at rest and in motion (think email) and especially on mobile devices.

BACKUP

Backup local. Backup to the cloud. Test backups often. If you aren't sure your backups are working properly, call us for a FREE ASSESSMENT.
